Viper 5704 manual

Something to keep in mind if you drive where they salt roads during the winter. Revelations , Feb 1, I know there hasn't been any activity in this thread for a while, but hopefully some of you are still sub'd! I'm tackling a V install in my Tacoma and have gone through a lot of reference information. The wiring schematic I found on modifiedlife. This is the opposite as the reference sheet in the OP but different year trucks. The Starter 1 and Starter 2 are switched between OP reference sheet and my wiring schematic as well. TheNatural , Sep 27, Follow your schematic. Revelations , Sep 27, Started this over the last 2 days; V in a doublecab. Still not finished, but getting closer. I wired the 3 diodes to the H2 Green wire and connected the one for the drivers door in the bundle behind the fuse panel. I have not hooked up the H2 Green passenger or rear door wires yet as the colours and locations have changed I will figure it out with multi meter just haven't finished that yet. EDIT: found some info on pg 13 of this thread that should help me finish this off! After a lot of frustration I grounded the green wire in the H2 harness and it worked fine. It seems there's an issue with the brain registering a "door open"; I thought it would work fine with just the one door wire connected from the bundle behind the fuse box but no luck. Might just be an issue because I haven't finished the door wires yet, but also seems like the diodes may cause an issue there? Programmed as per instructions for my vehicle and sequence of flashing lights indicated it worked correctly. Now that I have the brain set for my Auto transmission the remote start button gets the truck cranking, but it wont fire. It tries 3 times and gives up. I can even turn the key to "off" and remove the key and engine stays running until I hit the remote start button again to turn it off. This seems like a problem with the bypass? Please visit: For any additional questions please contact your autho- rized Directed dealer or contact Directed at Safety First sections of this manual prior to operating this system. Failure to heed this information can result in death, personal injury or property damage and may also result in the illegal use of the system beyond its intended purpose. Page 28 Contents Getting Started Page 29 Main Menu Page 30 Remote and System Operations Page Getting Started Getting Started Your Responder LC remote is powered by an internal rechargeable battery that can only be serviced by an authorized Directed dealer. Due to transit and storage time prior to your purchase, the battery charge may have depleted. To ensure proper operation, check the battery level and connect the battery charger if not fully charged. Hold: is used after Press actions when a button needs to be held in position for an extended period of time, typically several sec- onds. Page 34 Control Center Control button Status LED The Control Center, typically located on the upper part of the front windshield sends and receives commands or messages to and from your system. It consists of: The In-vehicle system antenna, for 2 way communication. Icon Description Armed: The system is Armed, the alarm is enabled. Locked: The system is Locked in Valet, the alarm is disabled. Disarmed: The system is Disarmed, the alarm is disabled. Unlocked: The system is Unlocked in Valet, the alarm is dis- abled. Manual Transmission Start mode is enabled, the engine can be started Displays the vehicle interior temperature On during Remote Start after performing the Defogger On command On during Warn-away and Full Trigger message output Basic commands control the most often used security and remote start fea- tures while Advanced commands control more specialized features and request reports. Page Runtime Reset Runtime Reset Press and release if more time is needed while remote start is active, runtime reset will reset the runtime counter to the pre-programmed setting. Note Remote Start must be On to use this feature. Navigating menus and options Navigating menus and features, changing options, and exiting are performed using the remote control buttons. When set to , the remote buttons AUTO lock after a 20 second lapse between buttons presses to prevent Page Remote Start Info Off after 72 hours if the remote control is not used during this period. Just press any button to resume system monitoring. When set to it wakes up every few seconds to listen for pages from the system. When set to it does not wake up to receive remote start or alarm trigger pages. Page Runtime Alert Runtime Alert Options: The main unit will send a page to alert you when the runtime is about to expire. When set to , an alert is generated when the Remote Start Time-out message is received. When , no alert output is emitted for the message. When set to , beeps are not emitted for button presses. System Type Options: Selects the type of system, namely; Security or Remote Keyless Entry to which the remote has been paired, and adjusts the text and main menu accordingly. Please note that your remote controls come pre-programmed from the factory. Page Demo Mode Demo mode: Demo Mode plays a pre-selected group of animations as a demon- stration tool to show friends or family. Starter Kill: The Failsafe starter kill relay prevents the engine from starting Note May require additional parts and installation Sensor

triggers: The onboard shock sensor can distinguish minor im- pacts from major impacts to the vehicle exterior. Faulty zones usually caused by dome light delay or open trunk are bypassed and reported via the control center LED and remote, while all other trigger zones remain active and are monitored to protect the vehicle. When disarmed, the report will display text to identify the two most recent triggers since the ve- hicle was last driven. To perform Pit Stop: With the engine running, set the parking brake and release the foot brake. The vehicle is ready to drive. Remote Start Safe-lock Remote start safe-lock makes sure the doors are locked while the en- gine is running and after, even if they are unlocked when remote start is activated. Page Temperature Reporting Timer Start operation Activation begins a countdown timer as set by the installer de- fault 3 hours. When the timer expires the engine starts and the message is sent to the remote control. Remote Start Time-out Alert During remote start a message is sent three minutes before and again at one minute before the engine turns off. Page Turbo Timer Mode Exit the vehicle, close all the doors and arm the system. If the door is opened in Step 3 then the engine continues to run. Turbo Timer Mode The system keeps the engine running for the Turbo Timer runtime and can be activated by remote control or optional dash mounted activa At 30 seconds the system arms itself. Page Valet Mode Valet Mode Valet mode can be entered and exited by performing the Remote Valet command or manually using the vehicle key and the control button. When entered, the alarm functions are defeated while the conve- nience features still operate normally. Page Accessing Commands Using the 1 way companion remote The companion 1 way remote commands the system features as shown in the previous table, but without the message display of the Responder LC remote. Page Programming Programming To enter; hold the button for 8 seconds, the remote emits one long beep and turns the LED on, the programming main menu has been accessed. To exit; press and release the button to go back and repeat to exit. Battery Replacement 1.
